# Lab 5

1- SlideShow

Next button: will navigate to next image

Previous button: will navigate to previous image

Slideshow: start sliding images

Stop: will stop slideshow action

Note: what about timerId value !!

2- Page containing only Three Div elements with box appearance, when user click at any div a copy from this div will be added to the end (the fired div wont be clickable any more, and the new div will beclickable). And so on…..

3- create a student input form as shown , user can add students full Name and Grade to a table in run time with the following constrains

Department: ⦿SD ○OS ○EL

StudentName [Eman]

StudentGrade [50]

[Add]

a- user Name should be string
In addition, make sure that student name is unique and appears in the table as a pascal case(no matter how the user typed it)

b- garde should be number between 0 and 100

c- the department reflection in your table will be as a background color

Eman	0
Ahmed	90
Mona	50
